

GRATNELL TRAYS

Gratnell trays are the number one selling school trays in the UK. They have been specially designed for science use. Made from extra strong 20% talc filled Polypropylene, the trays are chemically inert to the majority of school chemicals and semi fire retardant. With an antistatic additive the tray has passed B.S. 5873 for heavy educational use by the British Standards Institution. Mix and match your tray sizes safe in the knowledge that you have bought the best.

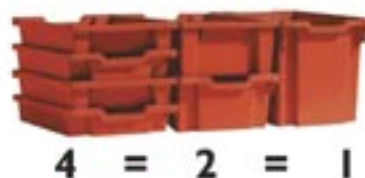

There are two ways to order Gratnells storage. Either select a pre-made up frame or trolley (see opposite) or design your own combination for your exact needs. The table below will help you work out how many trays fit in each column.
